WINSSHI

”Just Play And Earn!”

The fast-growing gaming industry is one of the largest entertainment Markets in the world that has flourished into a billion-dollar business. With the advent of Block-chain technology and Crypto currencies, the gaming industry has advanced in data handling and securing quick payment. The block-chain industry will turn this billion-dollar industry into a more powerful, trustworthy and robust platform for its users.

To generate revenue from this growing industry, game developers are constantly looking for SECURED ways such as standard online payment solutions that include Multiple payment aggressors, wallet providers, banks, etc.

WINSSHI is one such block-chain platform based on the Ethereum block-chain that facilitates the gaming industry. WIN tokens (WNS) is an exclusive cryptocurrency that can be used for in-game purchases as well as earn real-world currencies while gaming. Our platform is an added benefit to both the players and the game developers. Moreover, there is no Middle Man involved in any transaction. WINSSHI is here to take the gaming industry to an incredible stage.

Overview

The gaming industry is always evolving but it is also the most controversial sector because of the various issues it has faced over the years. The major issues include unprotected data, high cost, and fraudulent activities that can be solved using block-chain technology.

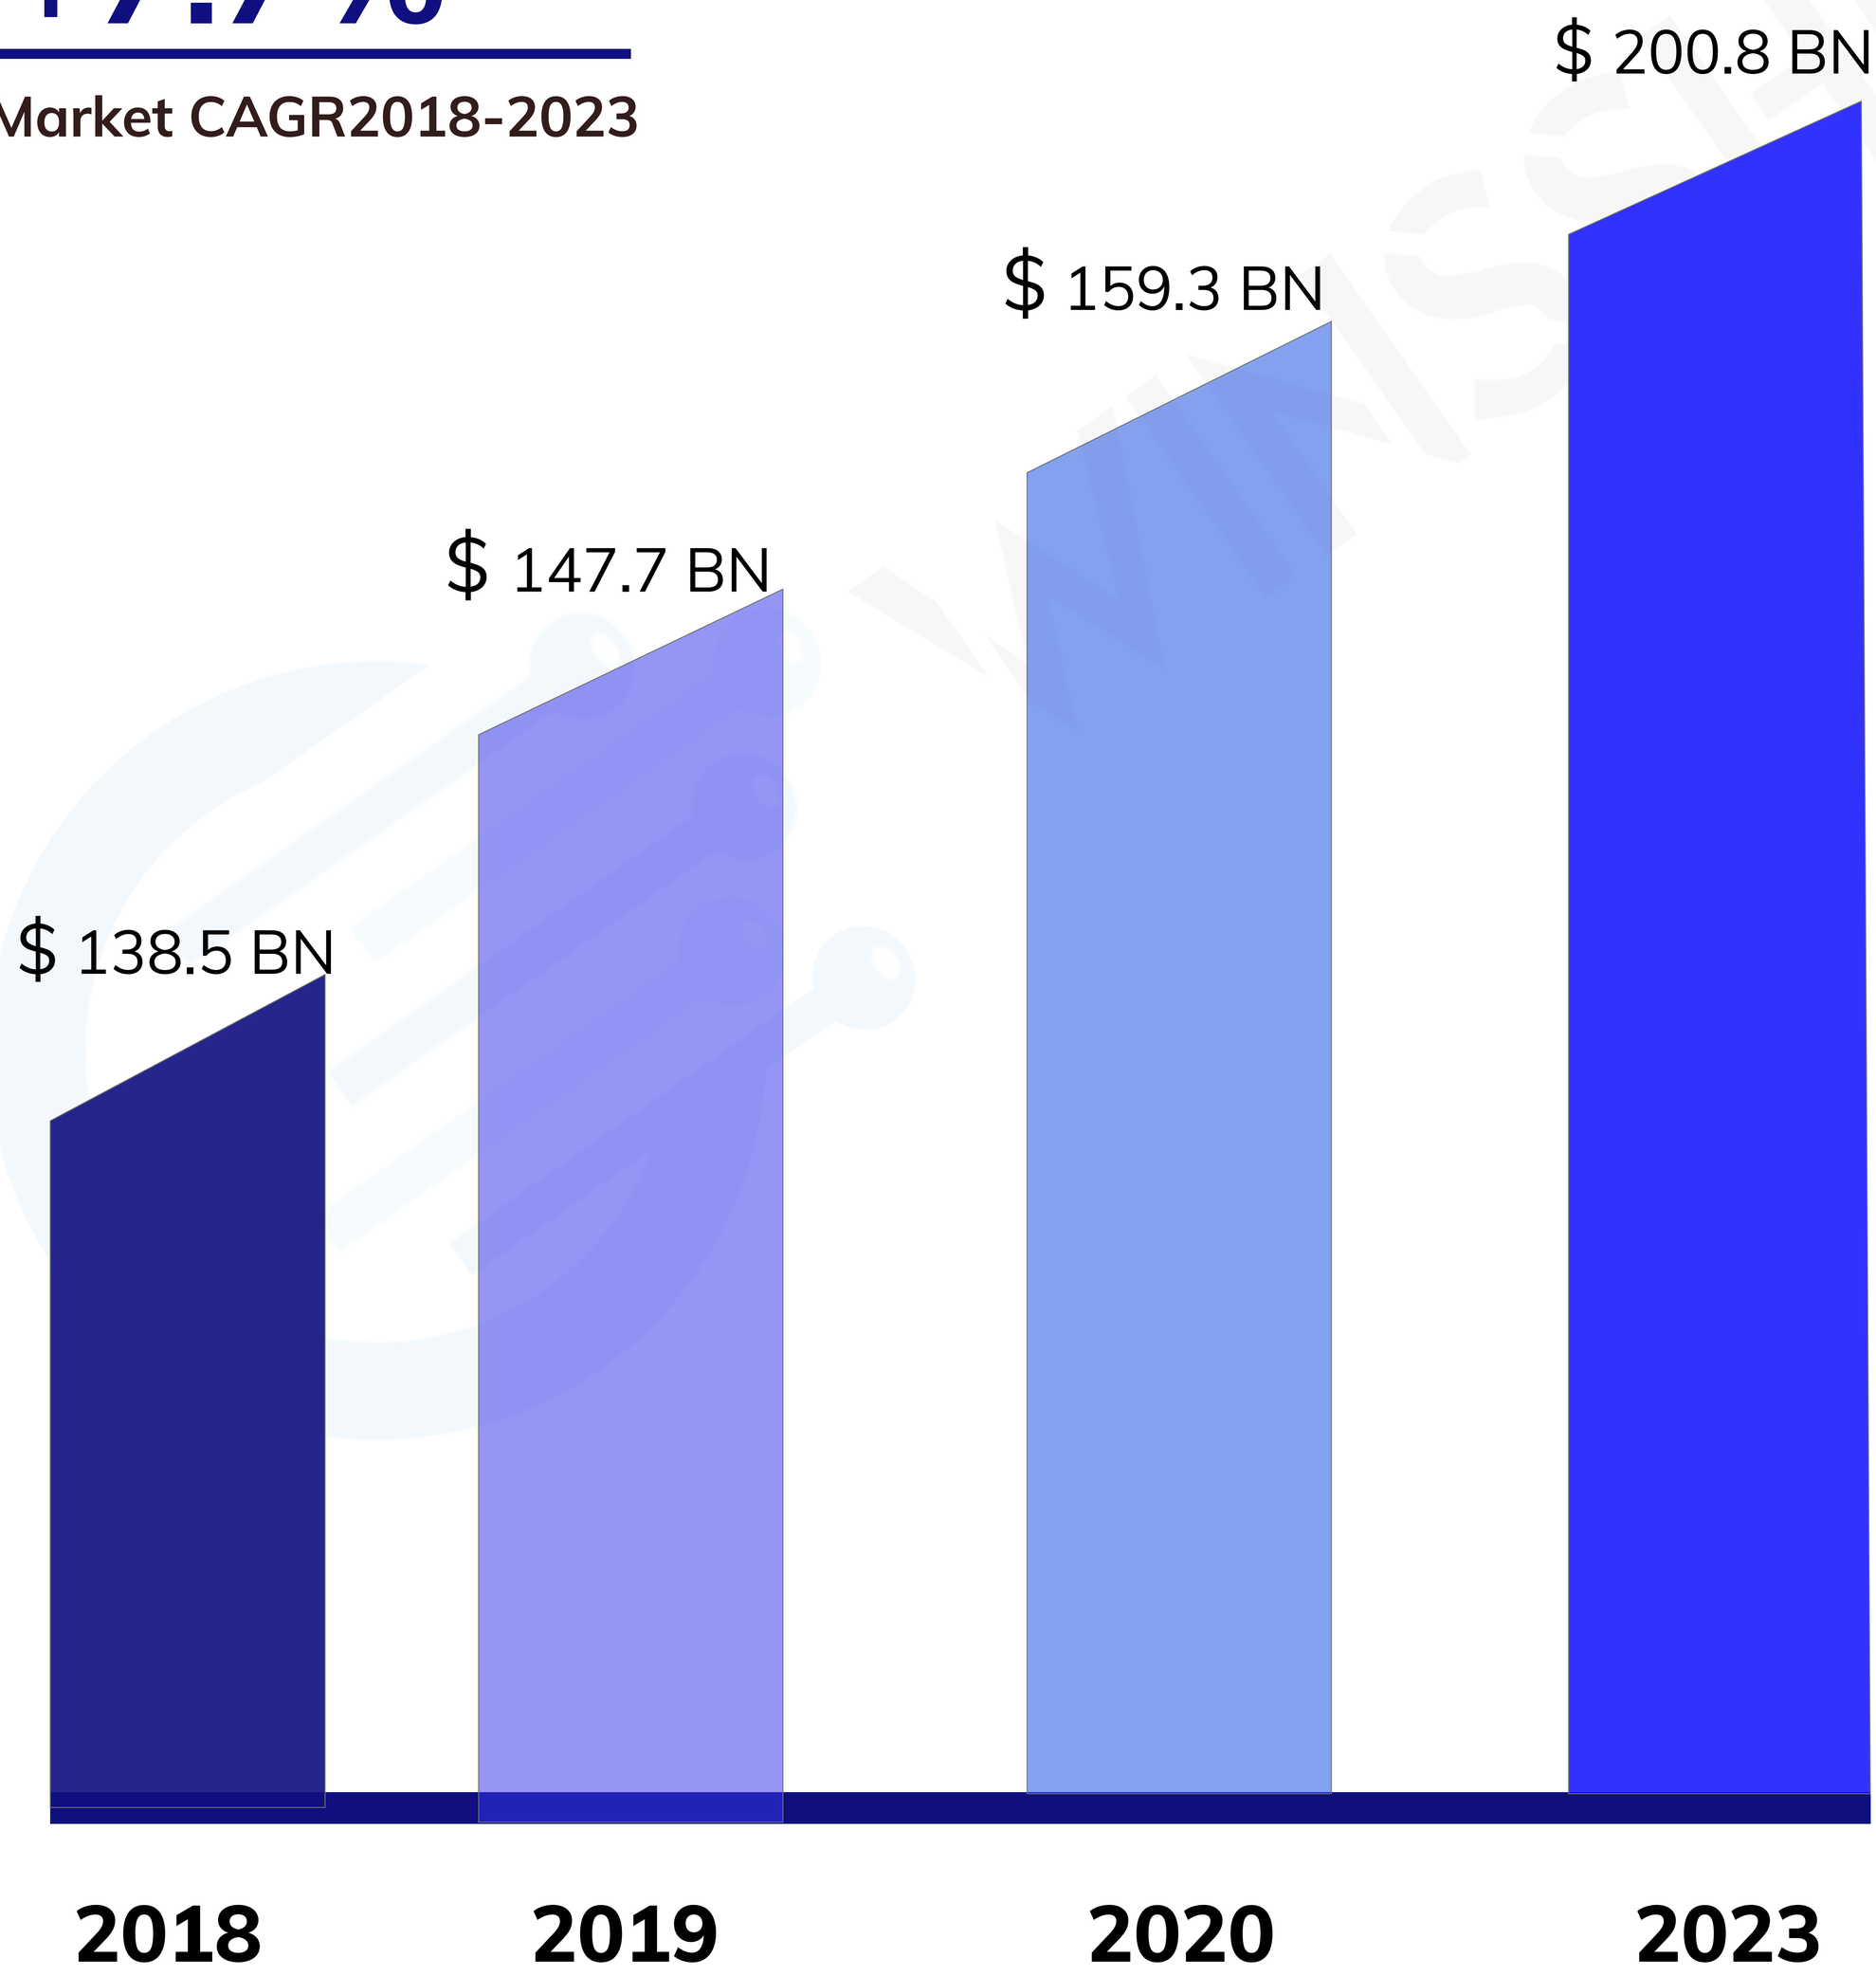
The value of the video game Market in the United States was estimated to be 17.69 billion U.S dollars in 2016 while the global video games Market was valued at 75 billion U.S dollars that same year. Over the last decade, the decline in physical video game sales has been accompanied by the growth in the share of the digital format. In 2009, 80 percent of the video games sold were physical copies and 20 percent were digital copies.

The global gaming Market was valued at USD 151.55 billion in 2019 and is expected to reach a value of USD 256.97 billion by 2025, registering a CAGR of 9.17% over the forecast period (2020 - 2025). Game developers across emerging economies are continually striving to enhance a game's experience by rewriting codes of diverse console/platforms such as PlayStation, Xbox and Windows PC.

The games market will continue to grow in the upcoming years, exceeding USD 200 billion at the end of 2023. By then, the forecast suggests that the games market will grow with +8.3% CAGR to USD 200.8 billion.

+7.7%

Total Market CAGR2018-2023



Problem Statement

Problems arise everywhere so as in the gaming industry. Consumer credential abuse is one of the Major threats to the gaming industry. Other threats include targeting gaming clients with vulnerable software to gain gaming credentials, credit card access and other cyber-crimes. These can lead to a loss of reputation and business. Due to increasing fraudulent activities, gamer lose trust even though it is a billion-dollar industry. The credentials of the players as well as the game developers are at high risk. Hence, it is important to establish a secure platform that protects the customer and the game developer.

Another problem in the gaming industry would be the cost. Distribution related costs could be as high as 30%. The game developers require a distributor to launch their game in the Market and the price fixed by the distribution company is usually unaffordable. The game developers are not paid well because of the third-party intervention which is precisely the distribution company.

For upcoming developers, it is very difficult to list their games due to substantial monopoly even though the content of their games is commendable.
One more glitch is that there is no direct contact between the players and the game developer.

Introducing Winsshi

To overcome all the obstacles in the present gaming industry we have come up with a concept of making everything transparent and decentralized. The technology that has been used in the gaming industry in the past has benefited only the big development studios and not the other game developers. Here comes a solution to all the problems under a single platform “WINSSHI”. In our platform, both the game developers and the players will be benefited greatly.
WINSSHI is a block-chain platform that offers a suite of smart contracts and Restful APIs providing the game developers and the players an experience better than the traditional gaming experience.

Built on the Ethereum block-chain, the WINSSHI platform Creates a gaming environment that is completely transparent and it also has the capability of integrating with any game regardless of it being implemented in block-chain or not. The platform is powered by a native ERC 20 token “WIN Token (WNS) “ which serves as a foundation for in-game purchases and enables the players to earn WIN token while playing the game.

WINSSHI block-chain platform is a distributed ledger and the transactions made in this platform are completely decentralized which allows the players to pay the transaction fee in a fraction of a second without any difficulty directly to the game developer. This could save a lot of money by way of subscription charges in the payment gateway. The intelligent implementation of block-chain technology in the gaming industry and the security feature that it holds allow for the growth of the industry and thus making it profitable for the players as well as the game developers. The facility offered by this technology builds immense trust in the customer.

”The World Is Your Playground”

WINSSHI platform is the product of aspiring and innovative minds both in blockchain and gaming platforms. The company is one of its roles to decentralize the gaming industry. It means a lot to the people who are daily users. The company’s main aim is to develop a robust and technologically advanced solution that is beneficial for all the people using the platform.

Mission Statement

Blockchain is only accepted by almost ten million people out of the 7 billion global population which means that it lacks real-world adoption. It is still looked over as a tool that is volatile and controlled by whales without any signs of acting like money. We wish to turnaround them by developing interoperable applications between blockchain and traditional applications that will promote the wider acceptance and usage of blockchain over the scale.

We strive towards the development of a more stable and robust gaming platform that can replace traditional gaming platforms or interoperate with it in a more modern and efficient manner.

Taking the gaming industry to a decentralized platform is the main objective of our company. So that the players and the game developers can make more and more money through the platform.

Vision Statement

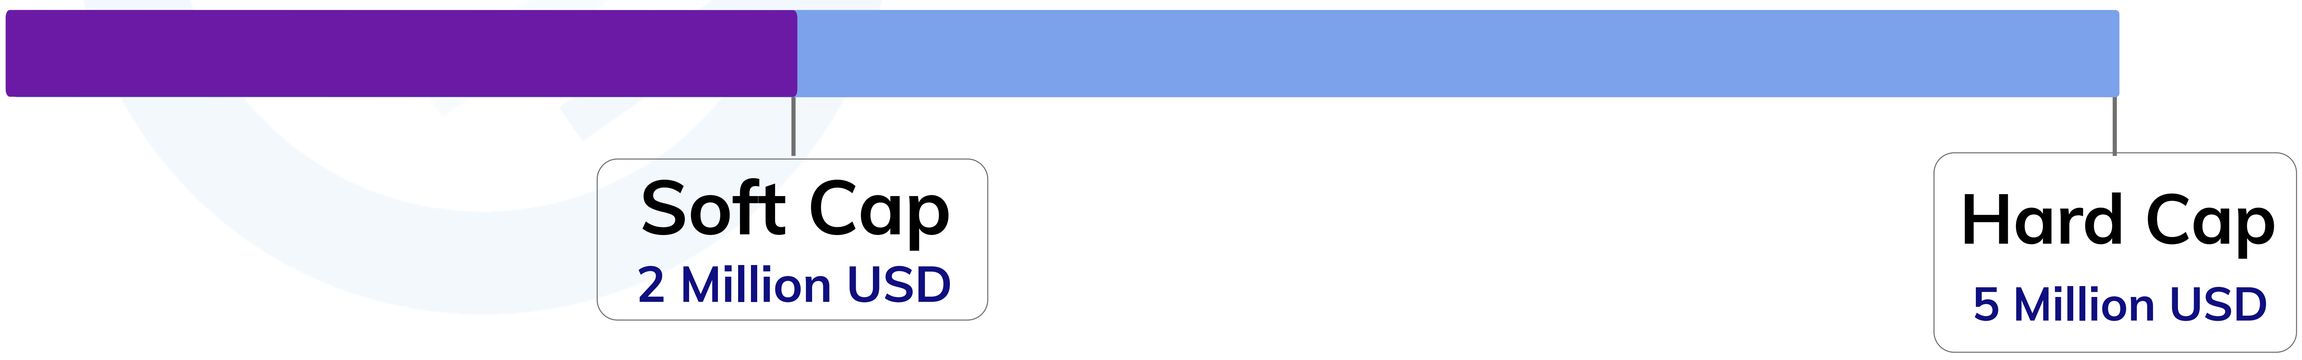
In our platform the game developers have the chance of publishing their game independently without the need for a publisher and all the credits of success for a particular game will be directly received by the game developer. The gamers will get benefits in terms of low subscription cost or in-game payments Made through purchases OR upgrades in the game.

Unlike other gaming platforms, WINSSHI supports every user of its platform to earn More COINS. In addition to that, the environment is very user-friendly for anyone to access. The prime goal of our company is that by introducing blockchain in the gaming industry we can Make every transaction More transparent and bring the data to a decentralized network. The chances of doing fraudulent activities can be completely ignored as it is completely impossible to tamper any data that is added in the blockchain.

Coin Information

Coin Name :	WINSSHI
Symbol :	WNS
Total Supply :	1,000,000,000 WNS
Decimal :	18
Price :	0.01 USD

You will get a merchant address where you can deposit your ETH , BTC , or you can also deposit Fiat (INR) through card.
Your deposit amount will be visible in your wallet after that you can buy WNS token through your balance.



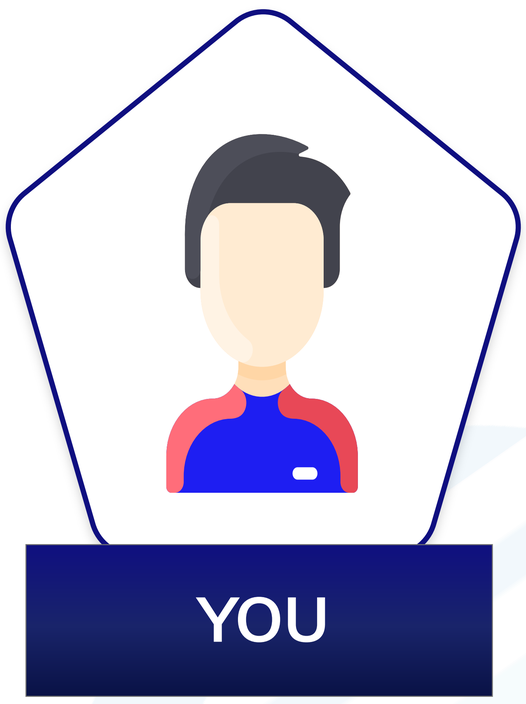
If Soft cap is not achieved then the invested amount will be refunded to ICO Investor`s respective wallet .

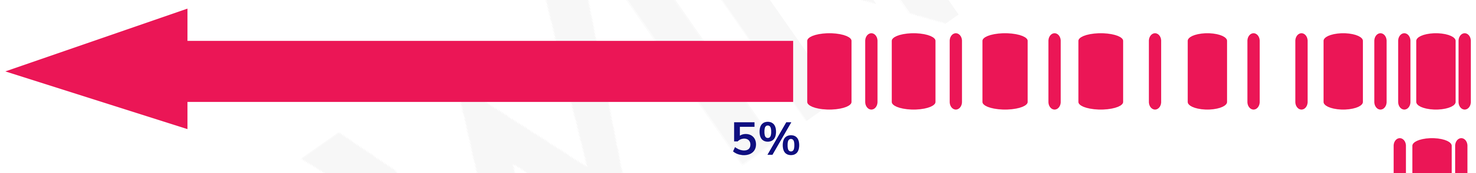
Referral System

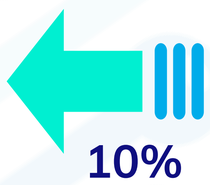
Each time you refer new person then receives direct 10% Bonus,

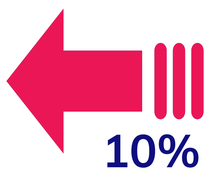
In this example your profit will be Level1 10% + Level2 5% get

HOW IT WORKS









Share your link and collect Bonus from both tiers of referral

TIER-1 ➡ Get 10% WNS
TIER-2 ➡ Get 5% WNS

Referral that sign up directly to your link

Share your link and collect Bonus from TIER2 of referrer

TIER-2 ➡Get 10% WNS

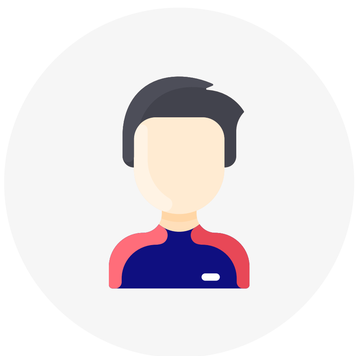
Referral that sign up with TIER 1 links

Bonus

We have a Bonus for large Investors.

Purchase more WNS Coins and we will credit extra bonus coins as described below:-

1. Purchase 10,000,00 WNS (10K USD) then get 30% extra WNS Coins
2. Purchase 3,000,00 WNS (3K USD) then get 20% extra WNS Coins



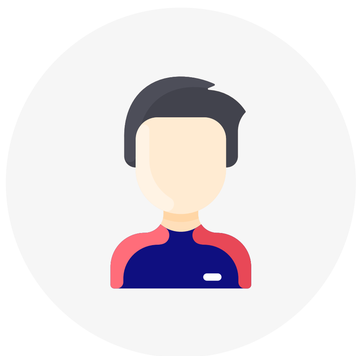
Purchase

10,000,00 WNS Coins

Get Bonus **30%** WNS Coins

Total WNS Coins

13,000,00



Purchase

3,000,00 WNS Coins

Get Bonus **20%** WNS Coins

Total WNS Coins

3,600,00

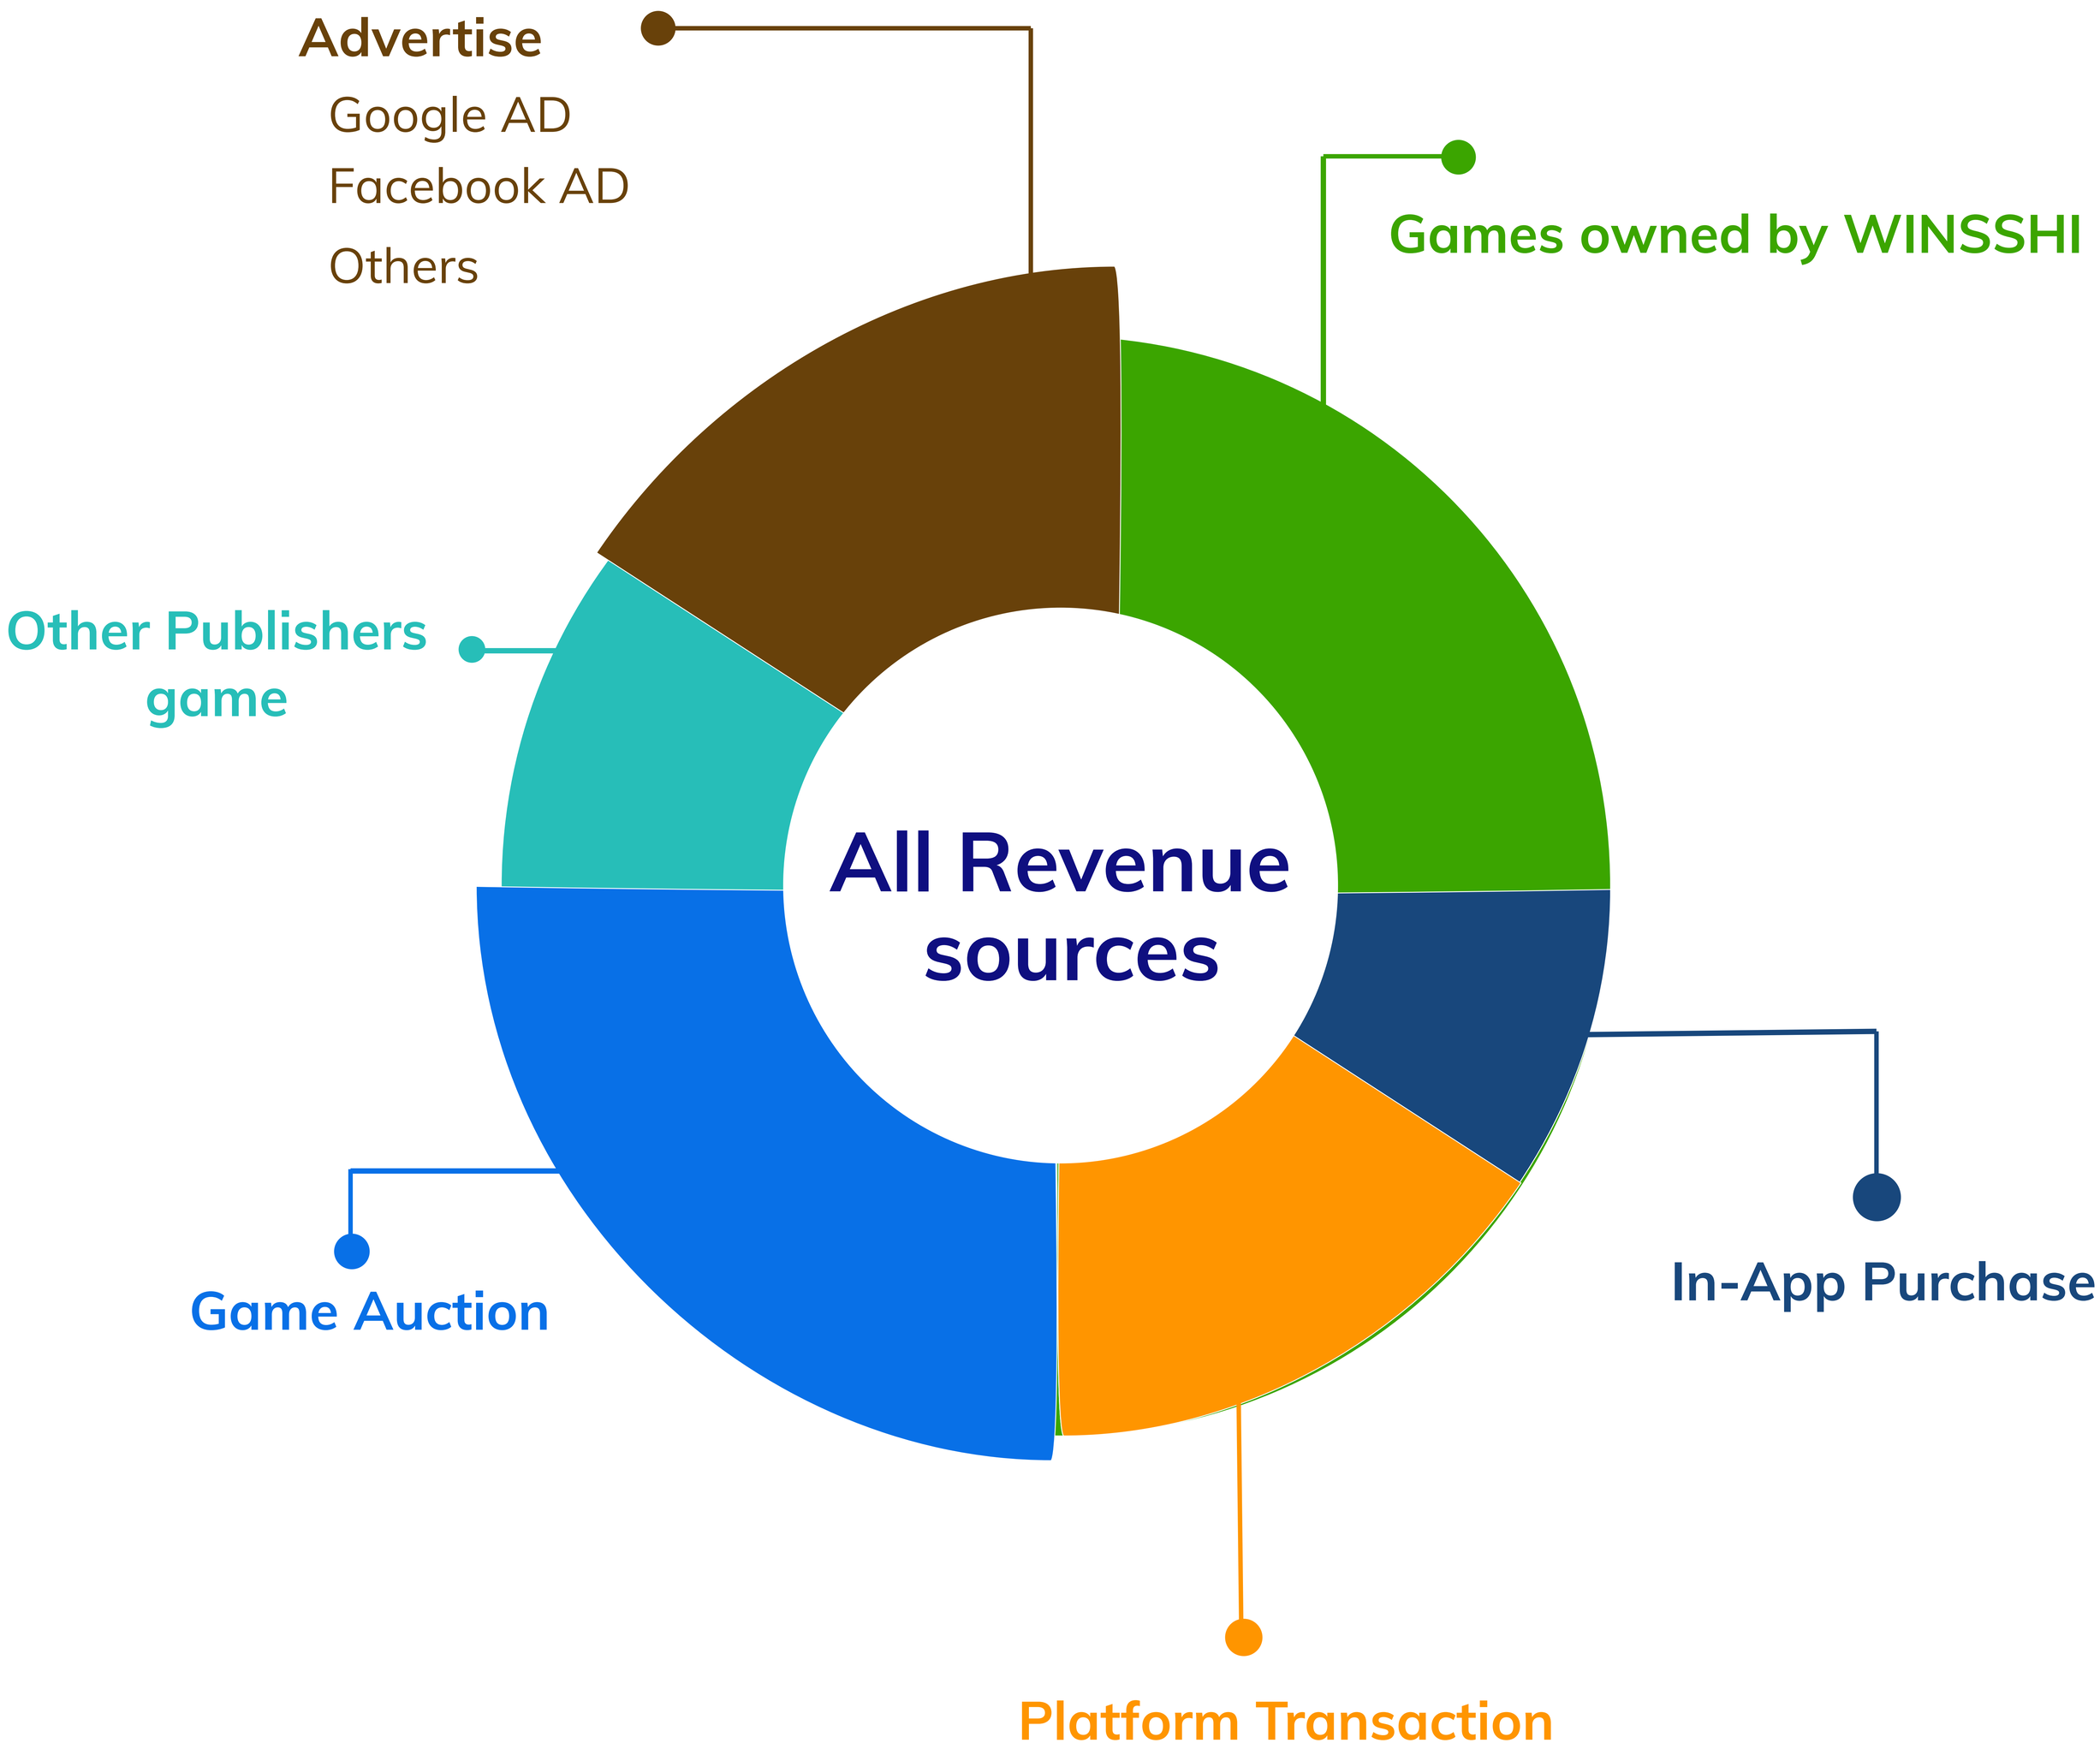
Revenue

At WINSSHI , All the coin holder are entitled to get monthly revenues that is being generated in WINSSHi platform from various sources.
As long as they hold their coin in WNS Mainnet, Investors as a passive income.
The revenues will be given to Investors` USDT wallet directly .
WINSSHI will distribute 50% of profit to all the coin holders in equal proportion every months .

If WINSSHI get profit of 10Million USDT then 50% of the profit will be distributed among the investors to these USDT wallet.
For Example-
If person hold token 10,000 WNS then he gets profit 8 USDT per 1000 WNS there for he will get 80 USDT to his USDT wallet address.

Sources of Revenues :-

1. Revenues from games owned by WINSSHI.
2. Advertise revenues from other publisher`s games.
3. Revenues from google AD, Facebook AD, and others.
4. Revenues from In-App purchases
5. Revenues from game auctions.
6. Revenues from cross platform Transaction.



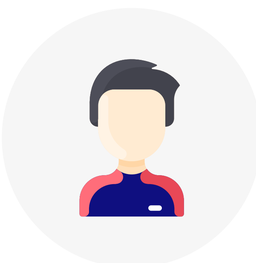
50% Profit Hold	50% Profit Distribute
WINSSHI	INVESTORS

Winsshi announced that they would make history by being the first to share a monthly revenue profit in the form of a USDT to every token holder.

For example :

Suppose total revenue of profit in a month is 10000 USDT, in which 50% will be distribute with token holders.

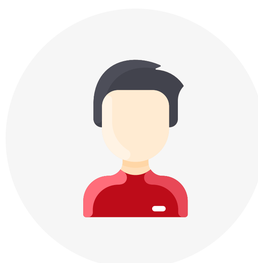
Calculation of distribution : 8 USDT per 1,000 WNS



USER A

1,000 WNS Token

Get 8 USDT

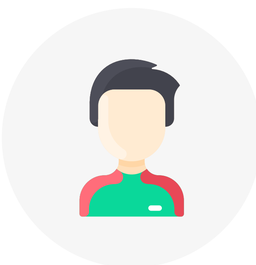


USER B

2,000 WNS Token

Get 16 USDT

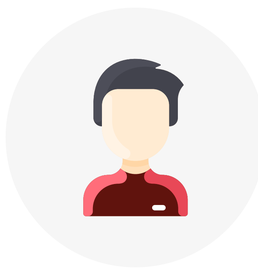
Calculation of distribution : 10 USDT per 1,000 WNS



USER A

1,000 WNS Token

Get 10 USDT



USER B

2,000 WNS Token

Get 20 USDT

Name - Hide Stone
Launch Date - April 2021

WINSSHI blockchain platform is a unique, decentralized, robust, and secure platform for gaming. It aims to provide a completely secure database which cannot be hacked or misused by anyone around the world. There are many advantages to people by using our platform.

Winsshi Platform

In the traditional gaming platforms, the developers faced many obstacles right from the development of the game to the listing of the game in the market. The developers try to get control of the server which runs all the aspects of the game. Practically it is not possible in those conventional gaming platforms as any changes made in the server could damage the functionalities of the game. To avoid these kinds of losses, the developers were made to create a licensing based system which probably means that the game developer itself did not own the in-game items of their own game. The publishing company will get the game from the developer based on the license only. If the server fails or any other malfunction happens in the game and all the data is lost, then nothing can be done including the in-game asserts and everything will be lost. With our WINSSHI platform, the actors own their in game assets. Game items will no longer be stored in the developer's server which is centralized in nature but in a decentralized platform called the blockchain.

With this feature, both the game developer and the player will have great utility with their in-game assets. Anyone in the platform can safely buy, sell, and trade the items according to their wish.

We are also intending to develop our own games and list them on our platform. It could be an added advantage for our customers. If the players play especially the game developed by us then there is a great possibility of gaining more WIN coins while playing the game.

Features

WINSSHI platform has its features and functionalities that make them stand above all the other gaming platforms.

The main advantages of the project ahead of competitors is that the other games based on the blockchain technology, are characterized by unattractive gameplay.

They either target very specific niche markets, games based on casinos,

At the moment there are no games on the market that focus on the main audience of casual players and offer exciting gameplay with high retention rates of players.

The unique use of advanced technologies (AR, blocking, geo-positioning) effectively enriches the game process.

The game will be interesting and useful for people who want to understand the principles of blockchain and cryptocurrencies in a risk-free environment. Equally, people who do not want to sit still and want to immerse themselves in an alternative reality creating powerful infrastructures that they will be able to view with a mobile device.

The ability to transform all the acquired gaming experience (in-game assets, resources, etc.) into cryptocurrencies.

In addition to all the above, the players can even earn parallelly while playing the game and increase the value of the asset.

We would incentivize players by offering dividends and granting them a vote in development processes.

WINSSHI Blockchain platform has impenetrable encryption and gaming cryptography which is quite hard to hack. This way, virtual items in the gaming environment will stay safe in the gamer's pocket.

How Blockchain Enables Winsshi

Unite The Stakeholders:

WINSSHI platform is a completely decentralized blockchain platform that has redesigned the gaming industry. Only a few stakeholders are involved in the gaming industry such as game developers, players, sponsors, advertising companies. With the WINSSHI blockchain platform, all the stakeholders will come under a single roof. Thus all the stakeholders are connected all the time and they can communicate with each other. The stakeholders can also use this platform to manage the game flow whenever they want.

Data Protection:

In the WINSSHI platform, all the data is stored in adistributed ledger. The digital assets and cash will also be stored safely and securely in the blocks permanently. The encryptions made in the blockchain will secure the data from tampering or other fraudulent activities. Thus making the platform more trustable by all the users around the world.

Secured Purchase:

Every in-game purchase can be made using WIN token and the transaction will be done in a fraction of seconds. There will be no middleman involved in any transaction made. The Blockchain Consensus Algorithm ensures that all the payments made are correct and immutable. So there will be less tension for the players who had paid money for subscriptions or whatever in the game. Hence there will be secured in-app purchases.

Transparency

Transparency is greatly improved in the gaming industry supported by blockchain technology. All the agreements made are visible to everyone involved. So it is not possible to do any unwanted activities in the game. And this could also lead to great investment opportunities by huge companies having an interest in the gaming industry.

Flexibility For The Players:

The game developers can also use the blockchain ledger to alter the digital items to make them rarer. They can also customize the game as needed. This brings opportunities to potential players who want to use their skills to give other gamers an opportunity for in-game business. This way of bringing more complexity in the game flow is called the merchandising of rare digital items

Proof For Asset Scarcity:

The WINSSHI blockchain platform will provide proof for asset scarcity. Hence, developing the interest of gaming for the users. The blockchain ledgers will allow the game developers to build rare digital assets and items in the 3D virtual reality games. Moreover, game developers can also create web pages through which they can track the availability of the most coveted digital asset in a gaming platform.

Facilitate the creation and trading of rarer in-game assets:

TWINSSHI platform is an Ethereum based blockchain platform that has its own cryptocurrency called WIN token. In-game assets with the same valuation as other in-game assets can have their corresponding crypto tokens. At a given point in time, all such assets will have the same value. So we can facilitate the trading of these tokenized in-game assets. Buyers of these assets can also trade them in crypto exchanges. Every in-game asset will have its own characteristics, therefore, the value will be different from other in-game assets. To represent these unique assets using crypto tokens, we use “ Non-Fungible Tokens ” (NFTs)

Technology & Infrastructure

WINSSHI

WINSSHI platform is based on advanced technologies that benefit all the stakeholders involved. Our platform is the first decentralized blockchain platform that enables all the game developers to list their games at free of cost. Like the google play store, anyone can list the game for free based on some basic criteria. If the game satisfies all the basic criteria then the developer can issue the game under their name itself. There will be no subscription cost to play the game. But there will be cost for in-game purchases.WINSSHI also aims at creating their own games and listing them on the platform.

There are three profiles for developers on our platform. If the developer has entered into our platform for the first time then they will be in the “Beginner Profile” and the subscription cost for the game developed by the beginner level game developer will be high compared with other profiles. And the complexity of winning each level will also be less. After the beginner level developer has published a minimum of 10 to 15 games within one year they will be promoted to “Experienced Profile”. The games developed by the experienced developer have a subscription cost less than that of the beginner’s subscription cost. To enter the “Top-Rated’’ profile the game developer in the experienced profile has to list another 10 to 15 games within the next two years’ time. And the games should be of high quality and the levels in the games should be difficult to complete

Beginner	Experienced	Top-Rated
Slightly higher subscription cost compared to other profiles	Subscription cost lesser than beginner profile	Subscription cost much lesser than other profile
complexity of winning each level can be less	complexity of winning each level and the quality of the game should be increased	Develop games with extreme complexit
Publish a minimum of 10-15 games within one year to get promoted	Publish another 10-15 games within a period of two years to get promoted	Publish at least 4-5 extraordinary games within a period of next two years
DONE	DONE	DONE

The game developers will be given tokens based on their profiles only. If the developer fails to attain the goal in the given time then they will be degraded to “Beginner Profile”. The game developers in the “Top-Rated profile should list at least 4 to 5 extremely difficult games in the next two years’. All the game developers should continuously monitor their listed games and do modifications in the game if needed.

The token holders in our platform will share our revenue. 50% of the revenue from the project will be shared with the token holders as dividends in USDT. This will benefit our token holders and increase the interest to buy our WIN token. And hence our WIN token will be on-demand in the market always

Special Benefits for In-Game assets:

In our WINSSHI platform, we are proud to implement ERC 1155 token protocol for doing any transaction with the in-game assets. ERC 1155 is advanced and optimized which allows safer and more secure transactions. All the transactions can be bundled together thus the cost of transferring tokens in the platform can be reduced.

The main idea behind the use of ERC1155 tokens for the transactions made with the in-game assets is that many numbers of items can be sent to multiple recipients and thus the strain in the network can be greatly avoided.

For the purchase of in-game assets in our platform does not require to deploy different smart contract code for each token. We are using ERC-1155 tokens, so the common code across all the tokens will be stored in a central smart contract with a unique identifier that can be referenced by all the smart contracts. This is an added advantage because it enables smart contracts to re-use the codes from the central smart contract. By implementing this strategy in our platform there is no need to co[y the repetitive codes, thus saving a lot of storage space. This could also reduce the amount of GAS fee wasted in processing the same code again and again. Our WINSSHI platform provides all these facilities which would benefit all the stakeholders on our platform.

Future of gaming industry

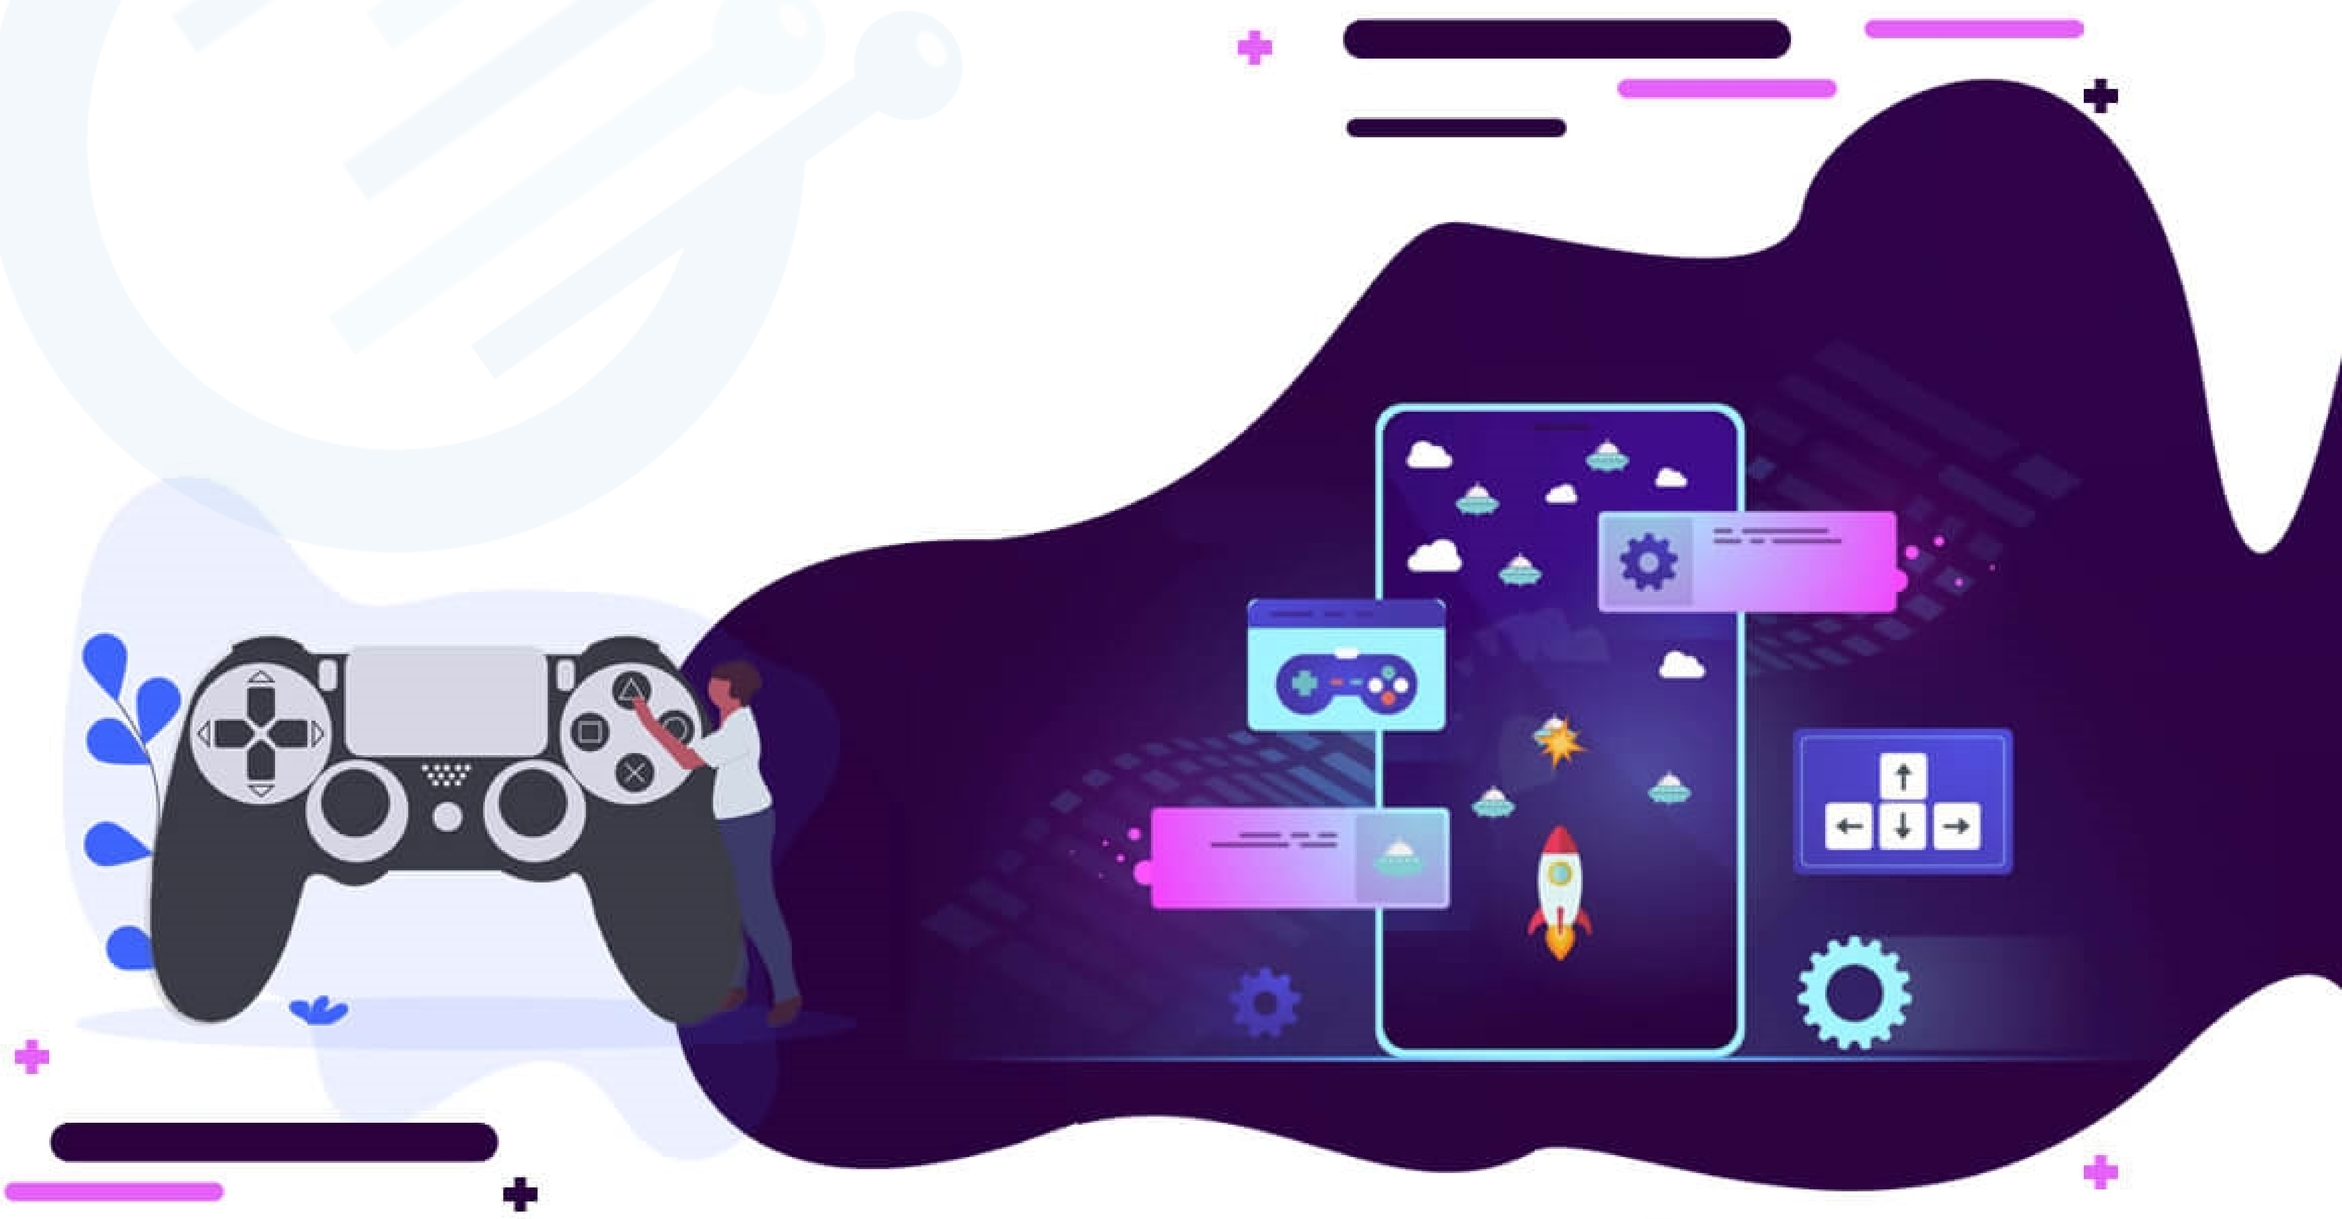
The future of the billion-dollar gaming industry is going to make all the people raise their eyebrows. Because the growth of these industries has been enormous in the past decades. The introduction of blockchain technology in the gaming industry has shifted everyone's attention towards it including the non-gamers.There are a lot of advancements that can be made in the traditional gaming industry by implementing blockchain technology. There are many technologies out there that can also be integrated with the gaming industry but the most effective techniques that will probably be the future of the gaming industry is the blockchain technology.

Every gamer in this world wants a secure and safe platform for gaming. As there will be many transactions happening in the gaming environment. Many in-game purchases will be done and real money will be involved in all the transactions. Blockchain integrated gaming platforms will offer secured and safe transactions without the help of another middle man like banks and other payment platforms. This will drive the people to use gaming platforms having blockchain facilities.

Improved communication will be enabled in future gaming platforms. So that the gamers can also suggest the game developers improve the game and this could be productive for both the game developers and the gamers. This kind of facility is available for all the gaming platforms which adopt blockchain technology. And this is also having an advantage that the stakeholders on this kind of platform can generate huge revenue.

In the future gaming industry, fraudulent activities can be completely controlled. Which probably means that there will be no illegal actions happening in the game. This could increase trust among the players inside the game. Blockchain is completely transparent and every player in the game can see the full history of the game. There will be no hiding of data. Everything in the block will be visible to everyone and the contents or data in the block added will be completely true. Once correct data is added then it can never be changed. So the gaming platform becomes more trustable and secure.

There will be a huge revolution taking place in the gaming industry in near future. So we can stand together and get adapted to the new technology and generate huge profits from the gaming industry.



For Game Developers:

WINSSHI platform is developed by the developers with a motive of paving way for the game developers to earn money through the decentralized plat-form.

The developers in our platform have access to all the tools included in our WINSSHI platform.

They can also earn more money through in-game advertising, second-hand sales, item trading, and referrals. The developers can also build powerful games and list them on the platform. If the game is powerful and the players are fond of the game, then it could lead the developer to earn more through that particular game.

In addition to the above-said benefits, the developer does not pay any cost to list their games on our platform. It is completely free. This will probably reduce the burden for the small developers, as they are not in the need of a big publisher who will charge more to publish the game in the market. Moreover, the WINSSHI platform is easy to handle for the game developers and to implement the game. The game developers own the full rights of the game and the in-game materials even after listing the game on the platform.

The game developer also has the freedom to remove any player from the game at any time even without the knowledge of the player if they had been involved in any of the suspicious activities that disturb the other players' harmony in the game and also the reputation of the game.

For Player

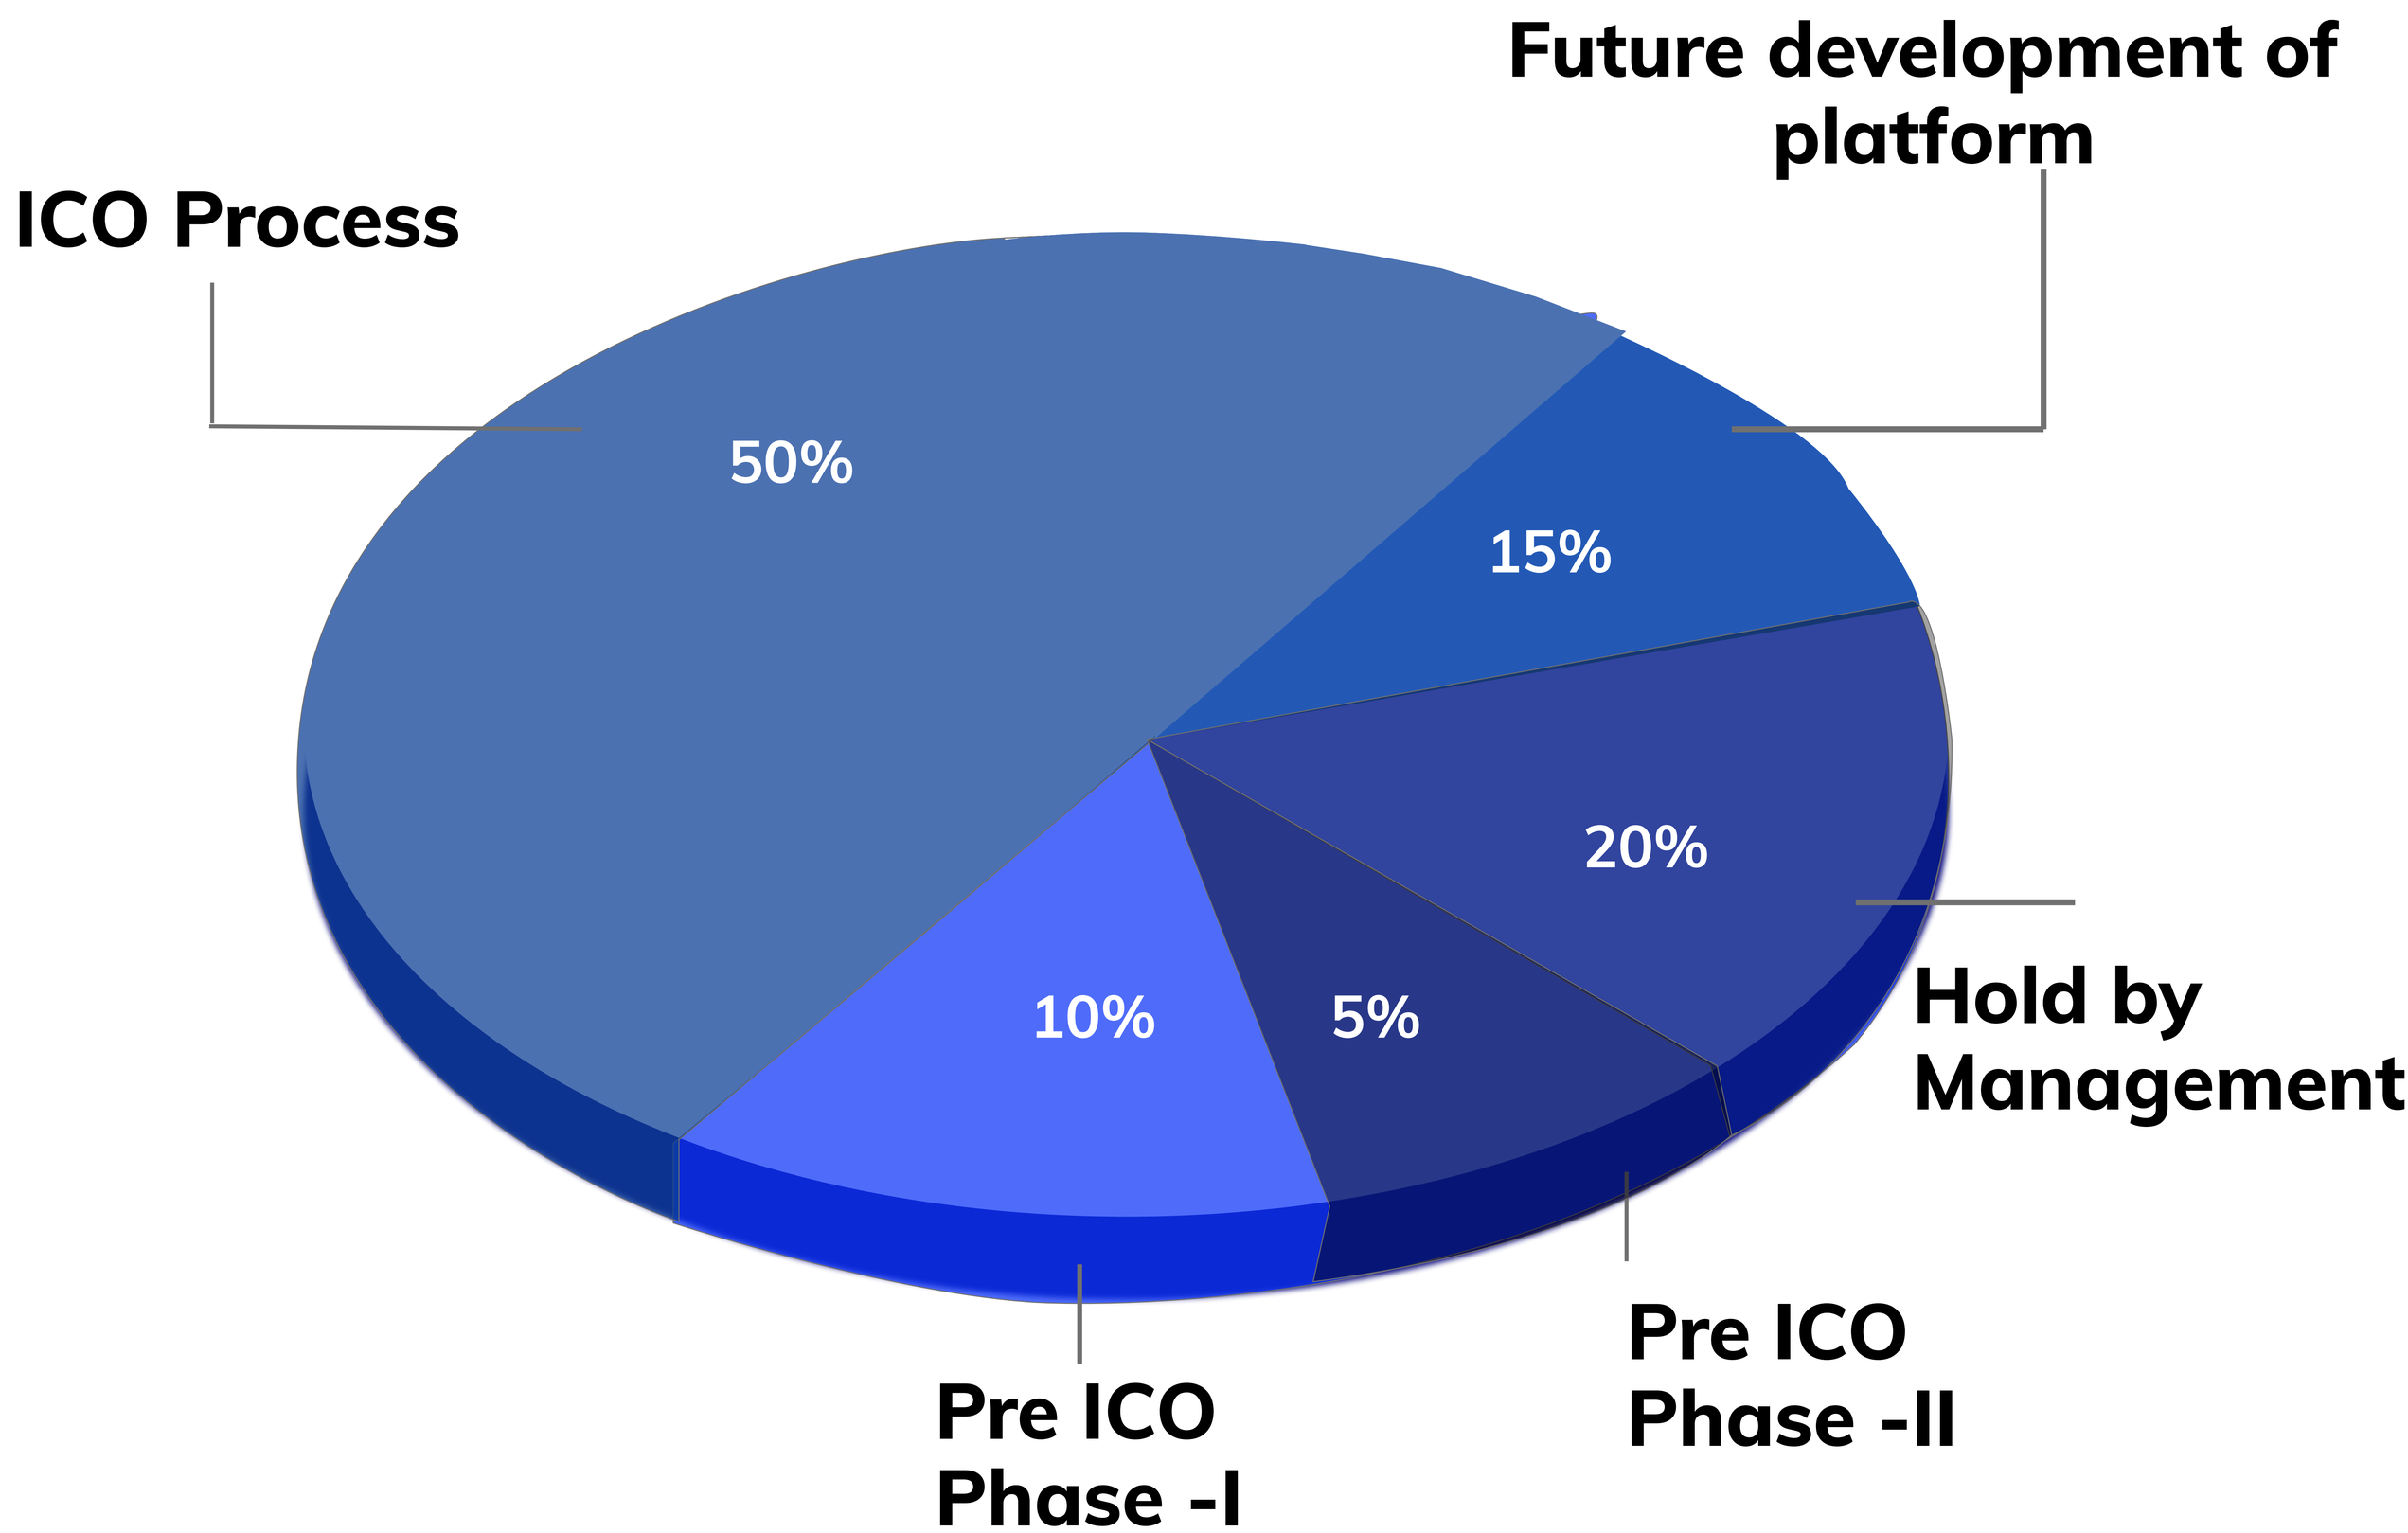
The gamers can play the game within a few minutes after subscribing to the game. There is no need to wait for a long time to play the game on our decentralized platform.

The players can earn passive money even while playing the game. WINSSHI platform allows the implementation of an in-game reward system similar to trophies/achievements on certain platforms when a particular task is completed by the player within the given amount of time. WINSSHI platform has been designed from the ground up to encourage viral uptake.

All the games on our platform are encouraged to be designed for easy invites and sharing so that users can create virtual groups and play with their friends. Additionally, functionality will be integrated which allows developers to grant affiliate revenue sharing to social players. The possibility for passive income generation for developers also will lead to higher quality games, something gamers will greatly benefit from. So the gamers can also earn money by playing on our platform.

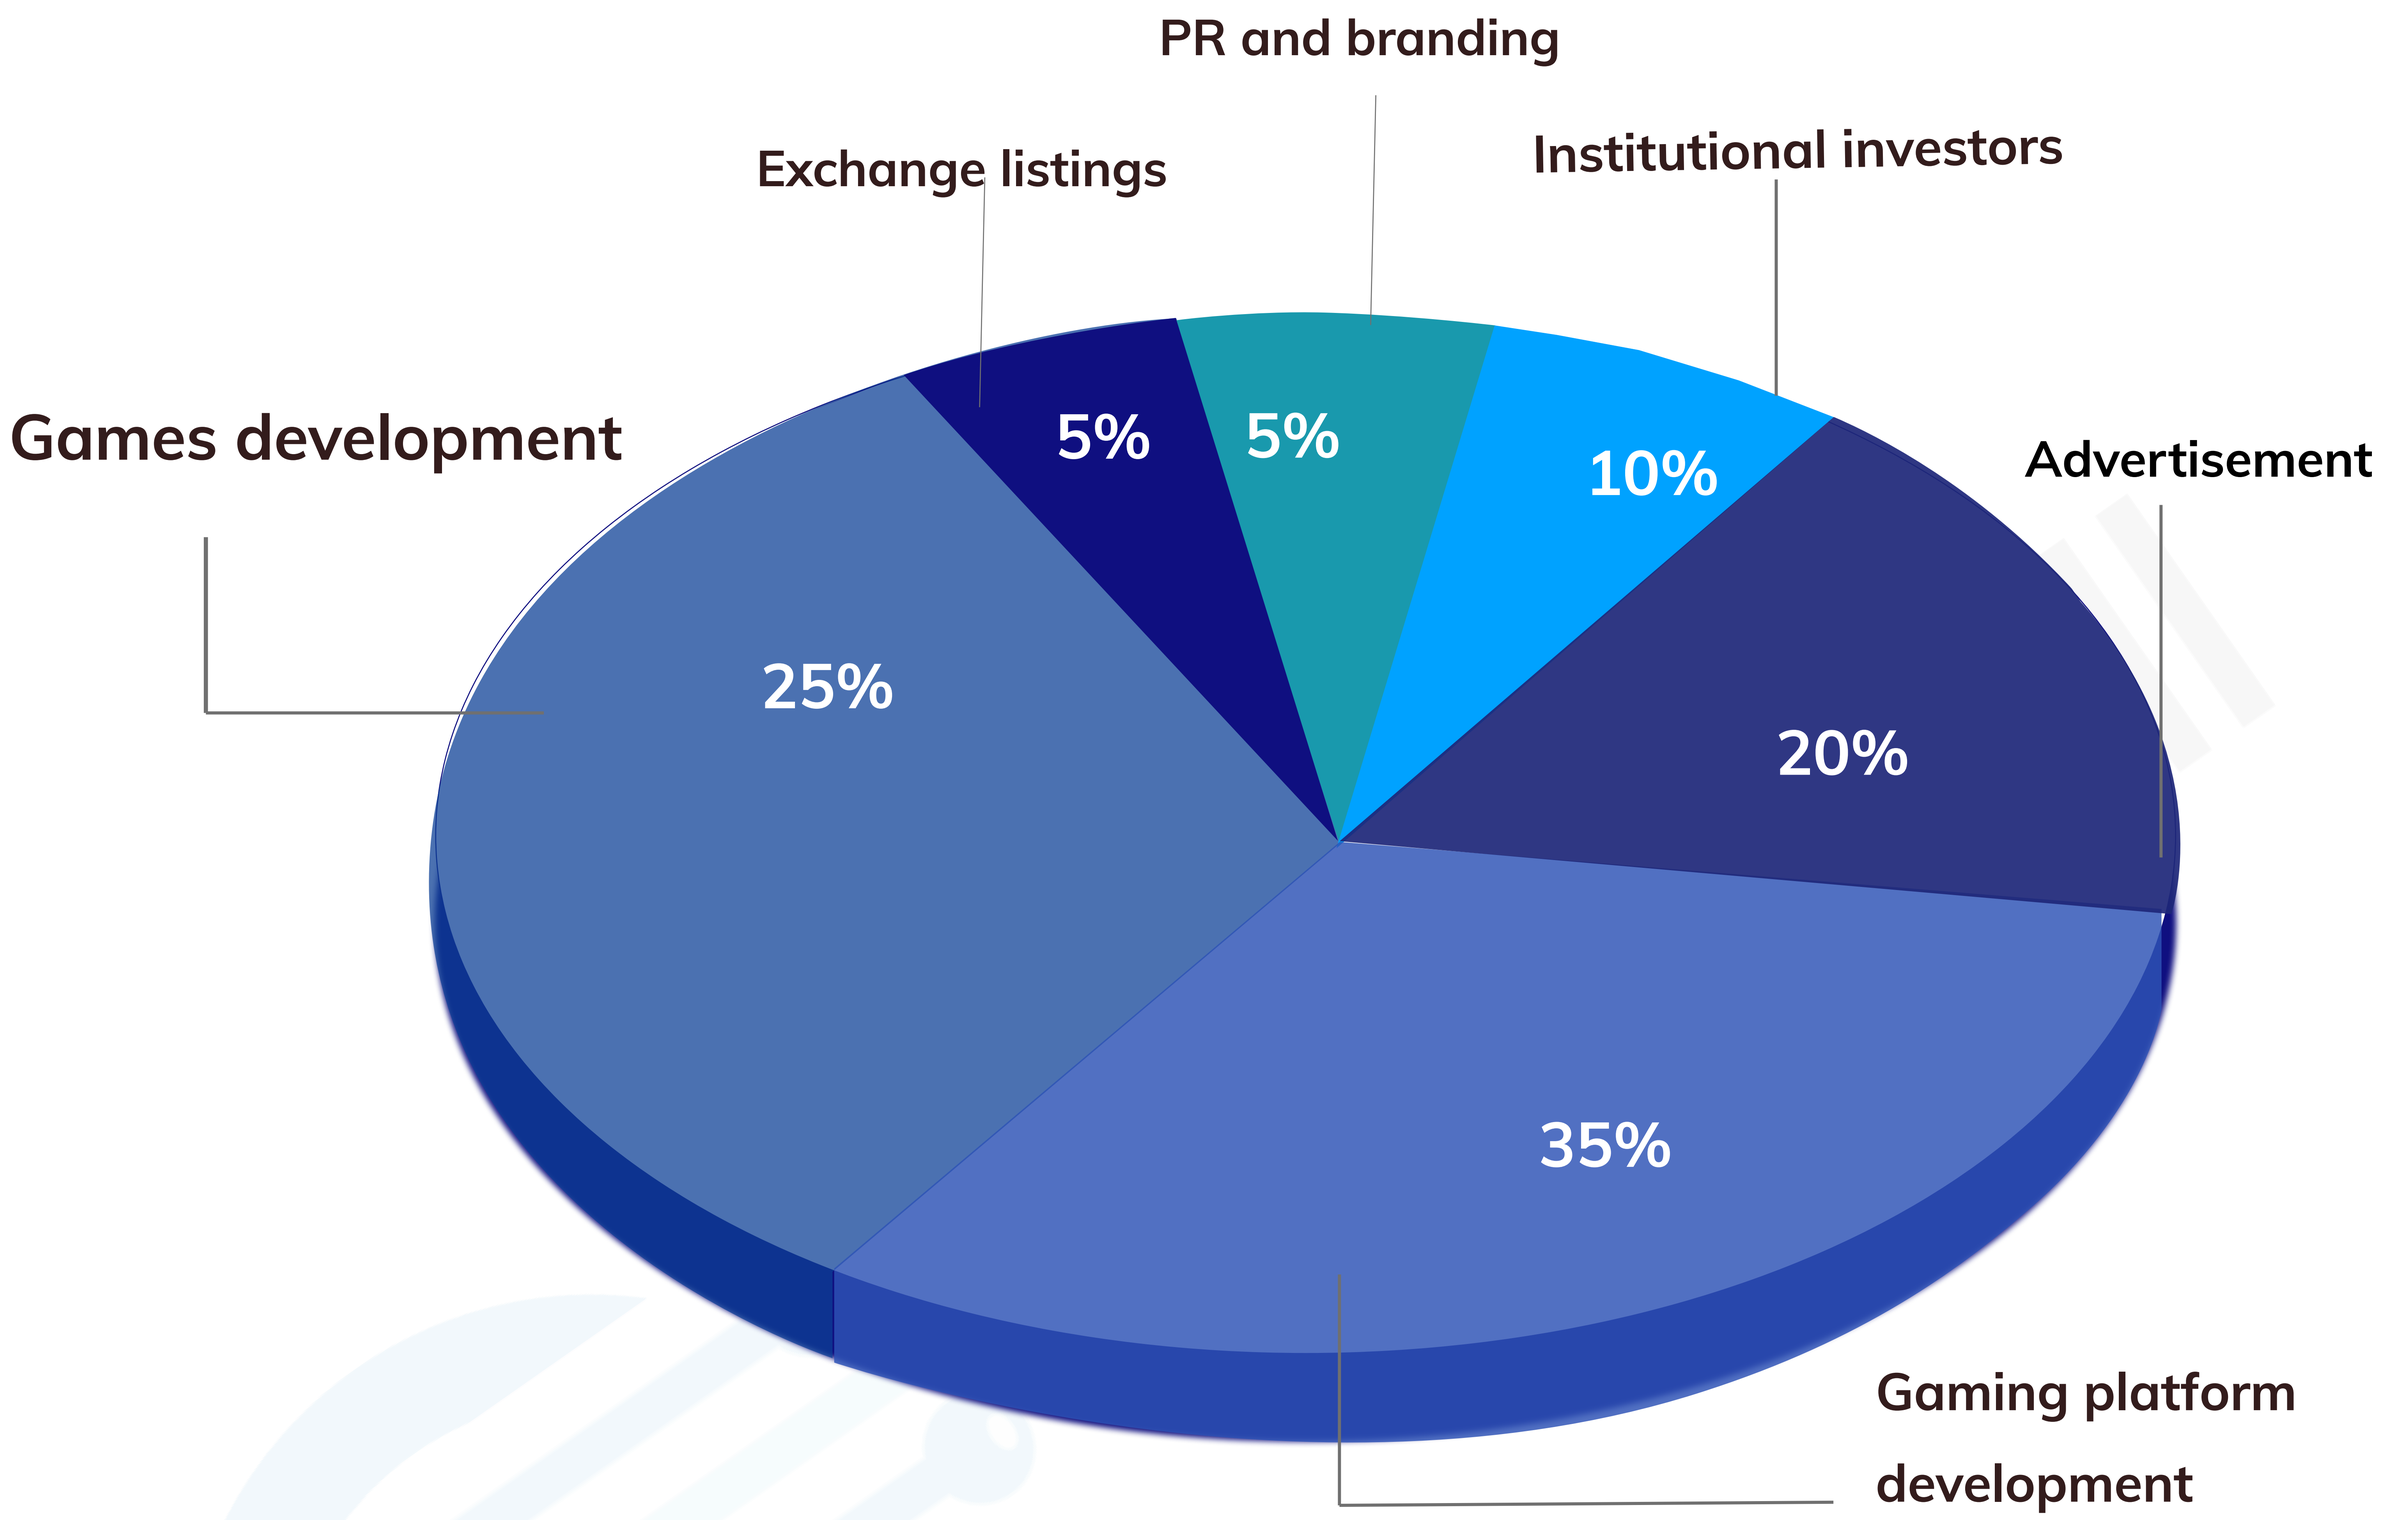
Our ICO process is to give our early supporters an easy opportunity to get into WINSSHI platform as well as provide timeframes for in-game implementation, we are planning a staggered release of initial WIN token supplies. While the total stock of WIN tokens will be fixed at 100.000.000 WNX and will be mainly available through the in-game APIs, we will sell certain amounts on public exchanges.

The planned ICO process flow is



The total token supply is about 1 billion.

Allocation of fund:



Token price- 0.01 USD(1 cent)

Fundraising is a big task in any business. If any angel investors are ready to invest in our project without any promotions or other fundraising programs then it is an added advantage to the project as the project will succeed.

Roadmap

WINSSHI

2018(Aug-Sep)
Conceptual design and team building

2018 (Nov-Dec)
Block chain mechanism development

2019(Feb-Mar)
Gaming platform framework

2019(Jun-Jul)
Team building and technology awareness

2019(Sep-Oct)
Office space acquisition

2019(Nov-Dec)
White paper creation and smart contract creation

2020(Jan-Feb)
First private sale sold out

2020(Mar-Apr)
Strategic partnership with various gaming companies

2020(May-Jun)
2nd private sale sold out

2020(Jul-Oct)
Starting of ICO

2020(Nov-Dec)
Listing of WNS coin in Binance,bittrex,kucoin and okex

2021(Jan-Feb)
WINSSHI gaming platform BETA version release

2021(Mar-Apr
Profit sharing module initiation

2021(May-Jun)
WINSSHI mainnet and products release

2021(Jul-Aug)
Listing of WNS coin in other exchanges

2021(Sep-Oct)

WNS coin burning

2021(Nov-Dec)

WINSSHI Hackathon

2022(Jan-Feb)

Global gaming hub creation

2022(Mar-Apr)

WINSSHI mobile application for various games and apps

2022(May-Jun)

WINSSHI operating system powered by blockchain

2022(Jul-Aug)

Office acquisition in India, South Korea, Brazil, NEW Zealand, and south Africa

2022(Sep-Oct)

WNS coin burning

2023(Jan-Feb)

Strategic partnership with various Advertisement companies and tech companies

2023(Jun-Jul)

WINSSHI IPO in USA stock exchange

CONCLUSION

Traditional gaming technologies and platforms are outdated and people started to look for new technological advancement in the gaming industry. This leads all the game developers around the world to shift to a new platform which is technologically sound, secure and trustable by all the people. Not all technologies will fit well in the gaming industry. Then, the golden platform called “blockchain technology” was integrated with the gaming industry and it fitted well with the environment.

Moreover, all the drawbacks in traditional gaming technologies were set right by introducing blockchain technology in the gaming industry. The revenue for all the stakeholders will also be increased by many folds. So all the investors of the gaming industry started to focus more on integrating blockchain technology with the gaming industry. This idea was taken by our team to implement the WINSSHI platform with a thought of giving a solution to all the game lovers and game developers to evolve to the next level gaming environment.

And hence we have proposed a solution for a decentralized gaming platform that establishes trust through cryptographic proof and regulatory oversight. Our technical design is implemented on the Ethereum network.

It includes an upgrade feature, an offline approval mechanism for high-risk actions, and a hybrid online-offline approval mechanism for token issuance that provides the desired level of security and flexibility. Our trust implementation involves all the stakeholders like game developers and the plates to form a network of trust. Together, these implementations form the WINSSHI platform, a regulated gaming platform that can serve as a viable medium for all the video game lovers around the world.

Because of the implementation of blockchain in the gaming industry, many changes will be faced by the traditional method of gaming. Finally, this billion-dollar industry will grow by all means until the last day of the Earth.
